

Aschenberg Residential Porch

American Building Components' SL-16® concealed-fastener metal panel profile was selected for use on the 300+ sq. ft. residential porch roof in Clive, Iowa.

About the Project:

Because of their low maintenance requirements and sleek building design, ABC's SL-16® concealed-fastener metal panel was selected for the exterior roof of this residential porch add-on by Archadeck of Central Iowa—a design/build company specializing in residential outdoor living spaces. This cost-efficient, standing-seam panel provides contemporary beauty and long-term protection that eclipses the features of most standard architectural shingles.

Looking for a galvanized, metallic look to subtly reflect light and complement the color of their siding, the building owner opted for Galvalume® Plus as the panel color. The longevity, aesthetics and cost-efficiency of ABC's SL-16® product ensures the attractive appearance, durability in varying weather conditions and peace of mind for years to come.
